

AUDITAI

PRESENTS

AUDIT AI

AI-Powered Smart Contract Security Platform

Static Analysis • Symbolic Execution • AI Detection • Continuous Monitoring

Team Unfiltered Devs | Securithm Product Line

2026 • SaaS Security Audit Platform • auditai.io

SECTION 01

Product Overview

What is AuditAI?

An AI-powered SaaS platform that audits smart contracts in seconds — combining 500+ static rules, symbolic execution, and an LLM engine, with A–F risk scoring and on-chain monitoring.

Why Now

\$3.8B+

lost to DeFi hacks

\$100B+

TVL at stake

47 days

avg. to exploit

Audits cost \$50K–\$500K and take 4–8 weeks. We do it in 45 seconds.

94.7%

DETECTION RATE

45s

AVG. SCAN TIME

6

CHAINS SUPPORTED

500+

VULN PATTERNS

One-line pitch: Ship secure contracts — before the hackers find the bugs.

SECTION 02

Problem Statement & Target Users

The Problem

- Manual audits take 4–8 weeks and cost \$50K–\$500K+ — critical bugs get exploited in as little as 6 hours.
- Even expert auditors miss 15–20% of vulnerabilities; static tools drown teams in false positives.
- Point-in-time audits go stale: 32% of exploits are reentrancy, 21% flash-loan attacks, 18% oracle manipulation.

TARGET USERS

Protocol Teams

Instant CI/CD scans on every push & PR before deployment

→ Faster, safer shipping

Security Auditors

Auto-triage findings; focus human effort on business logic

→ Higher coverage per hour

Investors & DAOs

A–F risk score any contract before investing or voting

→ Data-driven decisions

Exchanges & Launchpads

Screen listings at scale with the Risk Score API

→ Automated due diligence

SECTION 03

Existing Solutions & Their Limitations

Slither

Static analyzer

High false positives; misses cross-contract & economic bugs

Mythril

Symbolic executor

Slow on large contracts; shallow business-logic coverage

Manual Audit Firms

Human experts

\$50K–\$500K, 4–8 weeks, point-in-time only, hard to scale

Basic LLM Checkers

AI chatbots

Generic, no exploit grounding, no monitoring, no CI/CD

The Gap AuditAI Fills

- Multi-engine depth of an audit firm — automated, repeatable, and 100x faster.
- AI semantic layer catches business-logic & economic attacks that pattern tools miss (+23% logic-vuln detection, –35% false positives).
- Continuous monitoring keeps verdicts fresh — no more point-in-time audit decay.
- API-first & CI/CD-native: security embedded in the dev workflow, not bolted on.

SECTION 04

Proposed Solution & Key Innovations

01 Multi-Engine Analysis

Static rules (500+) + symbolic execution (10^6 paths) + AI semantic analysis — consensus scoring

02 AI Fix Suggestions

Context-aware patches with code, tests & deployment notes for every finding — not just an alert

03 Continuous Monitoring

On-chain surveillance of deployed contracts with 2.3s alert latency across 6 chains

04 Risk Score API

A–F grade for any contract address in one call — for investors, exchanges & DAOs

Competitive Edge

94.7%

vs 74.8% industry

–35%

false positives

45s

vs 4–8 weeks

\$29

vs \$50K+ audits

SECTION 05

Technical Approach — System Workflow

Avg. full-pipeline scan: 45 seconds standard contract • 3–8 min complex protocol

Detection Performance

Reentrancy 99.2%
vs 87% industry

Access Control 96.8%
vs 82%

Flash Loan 94.1%
vs 76%

Business Logic 89.3%
vs 58%

SECTION 06

Technology Stack — What Powers AuditAI

FRONTEND

Next.js 15 + React 19 + TypeScript
Tailwind CSS 4 + Radix UI components
Three.js / GSAP visualizations
Lucide icon system

BACKEND API

FastAPI (Python 3.12) · 14+ REST endpoints
JWT auth · API keys · Pydantic v2 schemas
Versioned /api/v1 · Uvicorn ASGI
reportlab PDF reports · Resend email

DATA & CACHE

PostgreSQL 16 + SQLAlchemy ORM
Alembic migrations
Redis 7 cache + task broker
Celery background scan workers

AI / ML ENGINE

Fine-tuned security LLM + RAG
Z3 symbolic constraint solver
500+ static detection rules
CVSS severity scoring model

BLOCKCHAIN LAYER

Solidity 0.4–0.8 · Vyper · Rust/Anchor
eth-account · Risk Score API (A–F)
6 chains: ETH, Base, Arbitrum,
Polygon, BSC, Solana

DEVOPS & CI/CD

GitHub Actions scan bot on PRs
Docker Compose infra (PG + Redis)
Vercel frontend deploys
Sentry monitoring + Resend email

END-TO-END REQUEST FLOW

Next.js Dashboard

FastAPI REST

Celery + Redis Queue

Analysis Engines

PostgreSQL

Alerts + Reports

SECTION 07

System Architecture

SECTION 08

Product Walkthrough — Live Dashboard

Real product UI · demo org data · scans, monitoring & alerting in production shape

Dashboard Overview

Quick scan (code / address / GitHub), live usage meters, CI status

Scans & Risk Grades

A-F risk grades per contract — VulnerableVault graded F

Continuous Monitoring

On-chain watchtowers with health status + activity feed alerts

SHIPS TODAY

Next.js dashboard (11 pages) · FastAPI (14+ REST endpoints) · GitHub Action CI bot ·

A-F Risk Score API · remediation workflow with sign-off & audit-trail export

SECTION 09

Tokenomics — SCRT Utility Token

Token Utility

PAY	scans, monitoring, API & enterprise plans
STAKE	discounts, priority access, higher API limits
GOVERN	vote on features, fees, ecosystem fund
EARN	bug bounties, referrals, community rewards

Token Distribution

Ecosystem Fund		35%
Community Rewards		25%
Team & Advisors		20%
Private Sale		10%
Public Sale		5%
Liquidity		5%

Vesting: Team 1y cliff / 3y linear • Private 6m cliff / 1y • Public 25% TGE

Economic Model — The Flywheel

1. Demand: teams need constant security coverage
2. Utility: SCRT pays for scans, staking, governance
3. Value accrual: fee burning + revenue buybacks
4. Growth: rewards attract auditors & contributors
5. Platform improves → more demand → repeat

Deflationary Mechanisms

- **Fee Burning**
share of every SCRT service fee burned forever
- **Buyback & Burn**
fiat revenue used to buy & burn SCRT
- **Staking Lockups**
loyalty tiers reduce circulating supply
- **Bounty Escrow**
treasury SCRT reserved for bounties & grants

SECTION 10

Business Model & Pricing

MOST POPULAR

FREE \$0/mo

- 50 scans/mo
- 1 monitored contract
- GitHub Action
- Community support

PRO \$29/mo

- 500 scans/mo
- 10 monitored contracts
- AI fix suggestions
- Slack/Discord alerts

TEAM \$99/mo

- 2,000 scans/mo
- 50 monitored contracts
- Remediation workflow
- Unlimited seats

ENTERPRISE Custom

- Unlimited scans
- Risk Score API
- 99.95% SLA
- Dedicated support

Revenue Streams & Unit Economics

• Subscription SaaS

core recurring revenue across 4 tiers

• API Licensing

Risk Score API for exchanges & wallets

• Usage-based

\$0.10 per extra scan; volume discounts

• Enterprise

custom infra, compliance docs, SLAs

SECTION 11

Development Roadmap

Q3 2026

- Cross-chain invariant monitoring
- Advanced fuzzing engine
- Formal verification module

Q4 2026

- MEV protection analysis
- Gas optimization recommender
- Custom rule creation SDK

Q1 2027

- ZK-proof verification
- Move language support
- Automated exploit simulation

Q2 2027

- WASM contract support
- AI exploit prediction
- Decentralized audit marketplace

Long-Term Vision

A fully automated security layer for the entire blockchain ecosystem — every contract continuously monitored and protected against emerging threats in real time.

UI/UX & Frontend

Poornita Sahu

Research & Presentation

Why We Win

- Only platform combining static + symbolic + AI engines with continuous monitoring at SaaS pricing
- Working product: Next.js dashboard, FastAPI backend, GitHub Action CI/CD — already scanning contracts
- AI fix suggestions close the loop from detection to remediation — a category first at this price point

The Ask

Raising to scale go-to-market, expand chain coverage, and grow the AI detection research team.
